

# VRP-W Website Templates

eCommerce systems can be expensive to purchase and maintain. Different tools must be combined to build a website that advertises what your business offers to attract and retain customers. Doing business online needs a shopping cart to securely receive orders from your clients and accept payments. Traditional eCommerce systems often rely on an email to be manually processed to receive orders or payments from the website, adding to the time taken to run your business.

The VRP-W website templates provide a secure and automatic bi-directional link between your VRP system and the website. Customer Accounts are created in VRP for review and acceptance when clients signup via the website, payments create payment batches and service requests create Work Orders. Any VRP service code can appear on the website. The website content is generated by familiar settings in your existing VRP system so there are no new commands to learn.
